### DETAILED ACTION

Claims 1-3 and 17-19, 21 and 25 are presented for examination.

#### ***Claim Rejections - 35 USC § 103***

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

The factual inquiries set forth in *Graham v. John Deere Co.*, 383 U.S. 1, 148 USPQ 459 (1966), that are applied for establishing a background for determining obviousness under 35 U.S.C. 103(a) are summarized as follows:

1. Determining the scope and contents of the prior art.
2. Ascertaining the differences between the prior art and the claims at issue.
3. Resolving the level of ordinary skill in the pertinent art.
4. Considering objective evidence present in the application indicating obviousness or nonobviousness.

This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

Claims 1-3, 17-19, 21 and 25 are rejected under 35 U.S.C. 103(a) as being unpatentable over Simpkins et al. (US 5,972,923) in view of Snow et al. (US 6,939,570).

Simpkins et al. teach the use of flavanoids, such as quercetin and kampferol for the treatment of Alzheimer's disease. See column 5, lines 1-12 and 39-42. The above reference makes clear that polyphenols within the scope of independent claims have been previously used for the treatment of Alzheimer's. The substitution of one polyphenol, flavanoid for another within the same genus would have been obvious to a person skilled in the art. See page 2, lines 10-25. Snow et al. teach the use of inner bark or the root from the plant *Uncaria tomentosa* for the treatment of Alzheimer's disease. See column 2, lines 10-30 and 63-67. The compounds extracted from such tree bark is listed in column 3, lines 12-32 and column 7, lines 25-57 and column 9, lines 50-67 continues to column 10, lines 1-15., It would have been obvious to a person skilled in the art to use the claimed polyphenols for the treatment of Alzheimer's disease, considering that the prior art teaches some species within the genus of the claimed compounds have been previously used for the treatment of Alzheimer's disease. Applicant in the previous response cancelled quercetin and kampferol from the dependent claims. It is the examiner's position that the cancelled components were within the genus of the independent claims. Therefore, the prior art teaches compounds within the scope of the genus of the independent claims have been previously used for the treatment of Alzheimer's. Therefore, the substitution of one flavanoid for another within a genus would have been obvious to a person skilled in the art.
